

National Date Center

Date centers are prevalent and an integral part of today's world. The Data centers support the communications industries and play a major role in the internet economy. They also support research and learning process and are the brains within most corporations and government institutions.

The main functionalities of the center are:

- Record keeping of foreign trade.
- Updated information of pension beneficiaries.
- Automatic billing for utility.
- banking database of accounts ,profits and loss and other related items
- Keeping statistical data /figures.
- Automating ticketing procedure for the ARIANA air ways.

Project Purpose and Objectives

The purpose of the project is to form a center where the equipment central to the government office can be hosted, such national database that could be for the government use or for the public use. These facilities enable the government organizations to provide E-service to the public that may cover educational, health, financial, banking and so on. The center will also serve the IT needs of the government offices, which includes the designing of the networks implementation and maintenance selection of the application software, development of the database solutions and giving overall advice to the government office in the ICT area.

Expected Beneficiaries and Outcomes

The beneficiaries of this project are the public, government and private sector. Government can make available the information related to the public and private sector online through this facility and public and private sector can access the information and can post the information through the online services of the centre.

Project Cost and Funding:

Starting Date: 2006
Ending Date: 2007
Required Budget: 3.00 million USD
Funding Agency: MoF
